Ismael Mohsen Fouad Rabi

Flutter Software Engineer

Egypt – New Damietta City ismaelmohsen1024@gmail.com +20 102 765 5070
https://linkedin.com/in/ismael-mohsen github.com/esmael-mohsen Full-time | Freelance | Remote

PROFESSIONAL SUMMARY

Flutter Software Engineer and Computer Science student (AI specialization) at New Mansoura University, expected to graduate in 2026. Experienced in building cross-platform applications using Clean Architecture, BLoC state management, and REST APIs. Delivered real-world production projects including e-commerce platforms and desktop management systems. Currently seeking full-time, freelance, or remote opportunities.

TECHNICAL SKILLS

Programming Languages

Dart | Python | C++ | SQL

Frameworks & Tools

Flutter | Supabase | REST APIs | Git / GitHub | Firebase

Architecture & Concepts

Clean Architecture | BLoC | Dependency Injection | OOP | MVC

AI & Computer Vision

Python | OpenCV | YOLOv8 | Tesseract OCR | TensorFlow

Languages

Arabic (Native) | English (Professional)

WORK EXPERIENCE

Flutter Developer – Freelance (Sera Kidz)

Currently Active

Production project for a children's clothing company – admin dashboard + client app | Currently Active

- Client needed full store control → built admin panel with product, inventory & order management → enabled client to run operations independently with zero technical support
- App had slow load times on large product catalogs → optimized rendering and asset handling in Flutter → reduced loading time noticeably, improving user retention
- Client needed marketing tracking → integrated Meta Pixel → enabled data-driven ad campaigns for the business
- Codebase was hard to scale → applied Clean Architecture with BLoC & Dependency Injection → made the app maintainable and easy to extend

Tech: Flutter · Supabase · Clean Architecture · BLoC · Git

PROJECTS

Full E-Commerce Platform

Complete e-commerce system with admin dashboard & client app

- Needed complete user lifecycle management → built authentication, user profiles, and product/category system → delivered a fully functional storefront from scratch

- Client required full business visibility → developed admin dashboard with order management and system controls → gave client real-time oversight of all operations
- Marketing performance was unmeasured → integrated Meta Pixel and optimized performance → enabled trackable ad campaigns and faster load times
- App complexity was growing → applied Clean Architecture with BLoC and Dependency Injection → kept codebase scalable and testable across features

Tech: Flutter · Supabase · PostgreSQL · BLoC · Clean Architecture · REST APIs · Git

Gym Manager – Desktop Application

Desktop management system for gym operations

- Gym had no digital system → built full member management with subscription and payment tracking → replaced manual records with automated desktop solution
- Owner had no visibility into business health → developed reports and statistics dashboard → gave real-time insight into revenue and membership trends

Tech: Flutter Desktop · Local Database · OOP · MVC

GRADUATION PROJECT

Electronic Glasses for the Blind (EGP)

2025 – 2026 (In Progress)

Intelligent wearable assistive system for the visually impaired

- Blind users struggle with navigation → integrated object detection & distance estimation → system provides real-time audio guidance to avoid obstacles
- Users couldn't identify people or read text → built face recognition, emotion detection, and OCR → system reads faces and converts printed text to speech
- Financial independence was a challenge → developed money detection with arithmetic support → users can identify and count banknotes independently
- System needed hands-free control → implemented voice assistant with haptic feedback → users interact naturally without needing sight or touch screens

Tech: AI · Computer Vision · Deep Learning · OCR · Speech Recognition · Embedded Systems

EDUCATION

Bachelor of Computer Science – AI Specialization

Expected 2026

New Mansoura University, Egypt

GPA: 3.0 / 4.0 (In Progress) | Relevant Coursework: Data Structures, Algorithms, Database Systems, AI, Software Engineering, OS, Computer Networks
